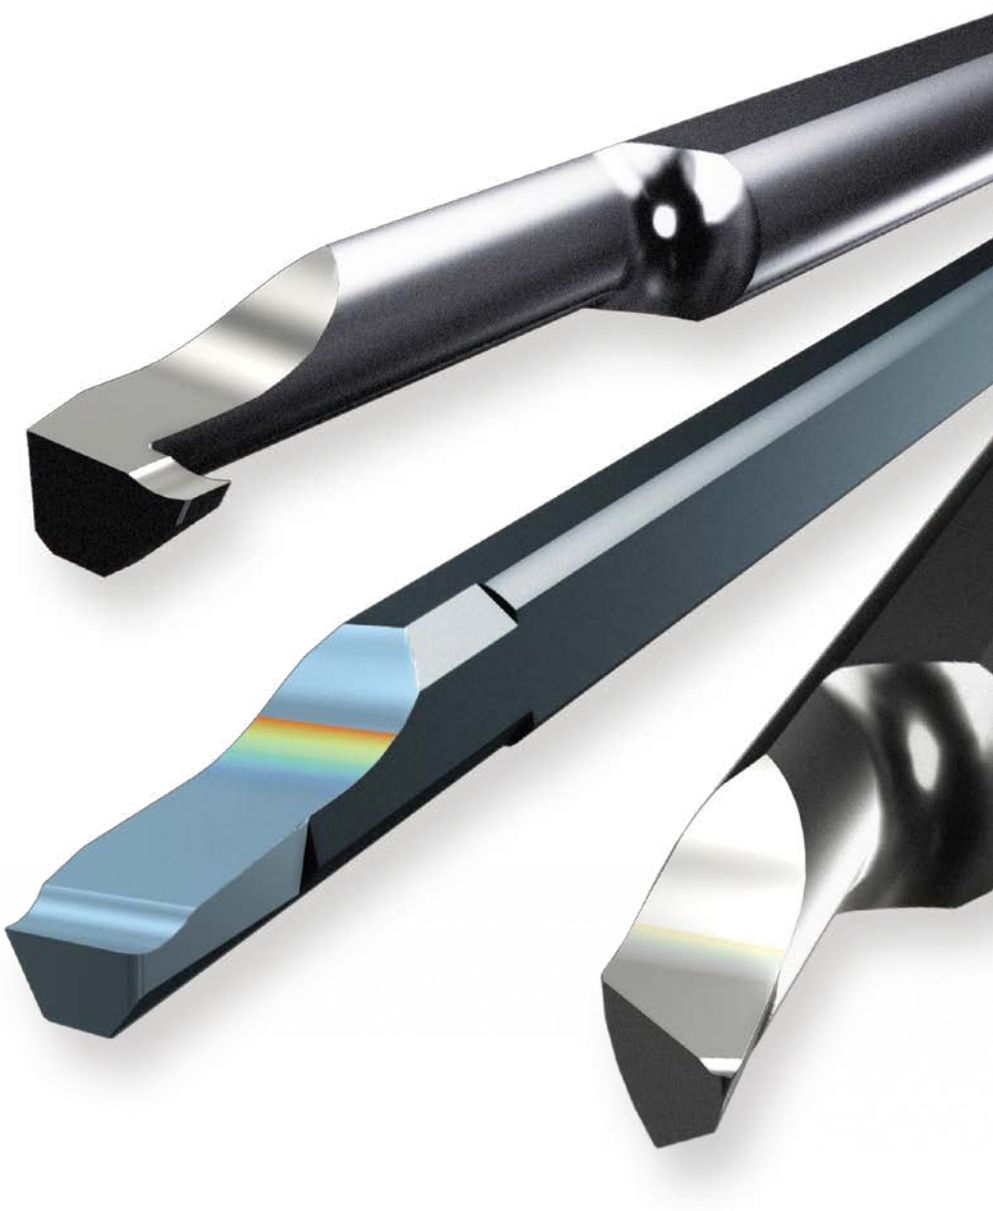
MICRO-MINI TWIN

BORING BAR FOR HIGH PRECISION AND SMALL PARTS MACHINING



DIAEDGE

MITSUBISHI MATERIALS

MICRO-MINI TWIN

IDEAL FOR SMALL-DIAMETER BORING OF STEELS AND STAINLESS STEEL

ECONOMICAL, SOLID SHANK TYPE WITH TWO CUTTING EDGES

A cutting edge on each end provides reduced tooling costs.

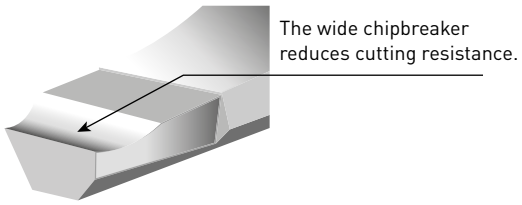
MULTI PURPOSE BORING BAR
The multi-functionality of the MICRO-MINI TWIN enables a wide application range that covers boring, grooving and threading and is available with or without a chipbreaker.

MINIMUM CUTTING DIAMETER:

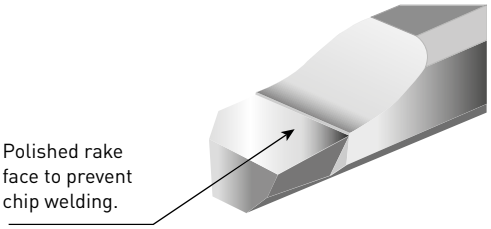
Boring:	Ø 2.2 mm ~
	RE: 0.05, 0.1, 0.15, 0.2
Copying:	Ø 3.5 mm ~
Grooving:	Ø 3 mm ~
Threading:	Ø 3 mm ~

AVAILABLE WITH OR WITHOUT A CHIPBREAKER

With chipbreaker



Without chipbreaker



The highly polished rake face and smooth cutting edge surface provides a superior product than conventional boring bars.

CUTTING PERFORMANCE

POLISHED RAKE FACE

MACHINING OF STAINLESS STEEL

Insert	CB05RS, VP15TF
Material	1.4301 (X5CrNi18-9)
Vc (m/min)	100
fr (mm/rev)	0.02
ap (mm)	0.1
Coolant	Wet cutting

The polished rake face prevents chip welding
and enables excellent component surface finishes.

CUTTING EDGE WEAR

NEW

SLEEVE

A sleeve specially designed the MICRO-MINI TWIN for optimum use on Swiss-Type lathes.

Sleeve inner diameter: 2.5 – 4.5 mm
Functional length : 67 mm, 85 mm, 110 mm, 135 mm

MS9025

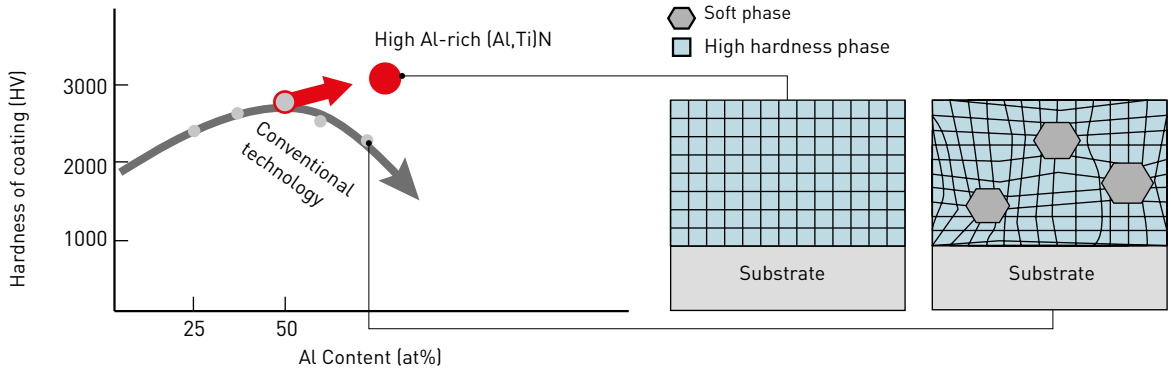
PVD COATED GRADES FOR HIGH PRECISION AND SMALL PARTS MACHINING

Effectively reduces notch wear whilst also providing fracture resistance.

HIGH AL-RICH (Al, Ti)N SINGLE LAYER COATING TECHNOLOGY

HIGH AL AND CONVENTIONAL COATING COMPARISON

The high Al-rich (Al,Ti)N single layer coating provides stabilisation of the high hardness phase and succeeds in dramatically improving wear, cratering and welding resistance.

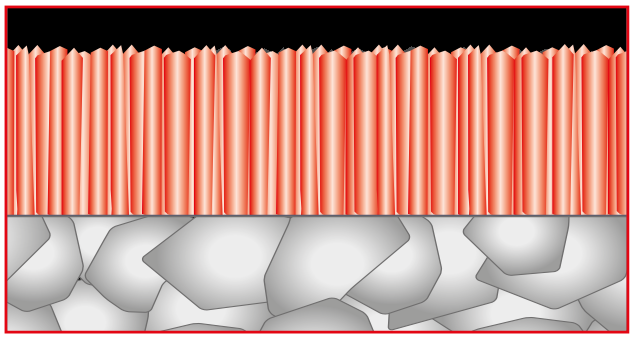


SMOOTH SURFACE OF THE COATING

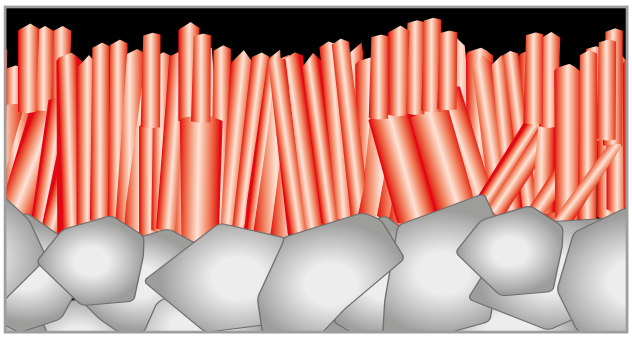
The even surface of the coating has been achieved by first making the carbide substrate smooth then by promoting straight growth of the coating crystals. This leads to excellent welding resistance.

Smooth Cemented Carbide
- Straight crystal growth
- Smooth carbide surface
- Excellent welding resistance

Rough Cemented Carbide
- Random crystal growth direction
- Performance is variable due to defects and voids in the surface



MS9025



Conventional

MS9025 grade for stainless steel added to the series MICRO-MINI TWIN.

MS7025

PVD COATED GRADES FOR HIGH PRECISION AND SMALL PARTS MACHINING

A precise nano-multilayer coating provides dramatically improved welding and wear resistance.

NANO-MULTILAYER COATING

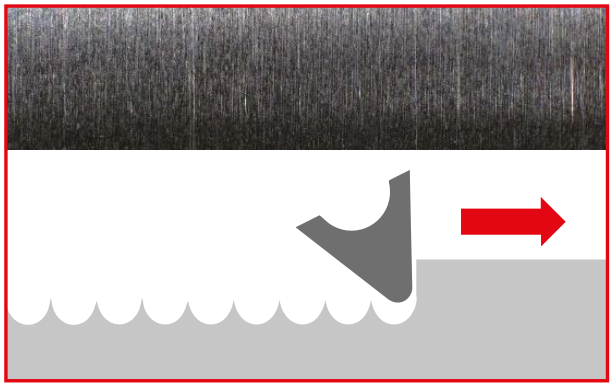
By combining the high lubrication layer with excellent welding resistance, and the high hardness layer with a greater wear resistance that suppresses the progress of wear at the nano-level, damage when machining is significantly reduced. Additionally, machining marks on the component surface are reduced.

IMPROVED QUALITY OF THE MACHINED SURFACE

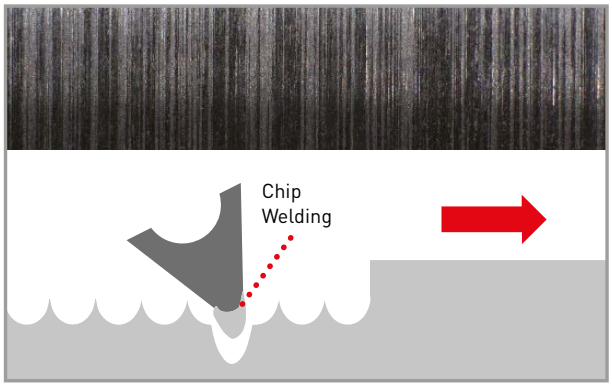
The nano-level, high lubrication layer suppresses built-up edge caused by chip welding which tends to occur in low feed machining and in addition reduces machining marks on the component surface.

SURFACE FINISH

Surface Finish



MS7025



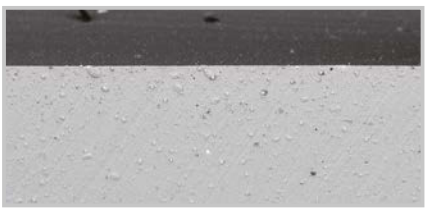
Conventional

IMPROVED MACHINED SURFACE QUALITY

MS7025 improves machining accuracy and suppresses burrs and sudden chipping by maintaining uniform, sharp cutting edges.

MS7025

Enlarged photo of the cutting edge



Conventional

MS7025 grade for stainless steel added to the series MICRO-MINI TWIN.

1. Recommend wet cutting.
2. The recommended tool overhang of CR type is LU + 2 mm.

● : Inventory maintained. ★ : Inventory maintained in Japan.

PRECAUTIONS WHEN USING THE MICRO-MINI TWIN

When using a holder for general purpose / small automatic lathe:

1 To avoid chipping of the 2nd cutting edge take care when inserting the boring bar into the holder. Refer to fig.1. If the 2nd edge contacts the internal face of the holder there is a possibility that it may chip.

2 When using this type of holder, there is a possibility that damage to the shank and the 2nd cutting edge can occur. Make sure that the clamping screws are tightened to the set torque value. Additionally make sure that there is no clamping screw near the 2nd cutting edge as this can break the boring bar.

When using Mitsubishi Materials holders:

When using holders with a tool overhang of recommended quantity, ensure that the 3rd clamping screw is removed prior to machining. (RBH1620N, RBH19020N, RBH2020N and RBH2520N do not have the 3rd screw.) The set torque value for clamping screw is 2.0 Nm.

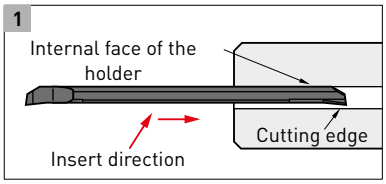
When using a square type holder:

1 When installing the boring bar into the holder, tighten the clamp screws after ensuring the flats on the tool holder are parallel to the reference flats on the MICRO-MINI bar. Refer to fig.3.

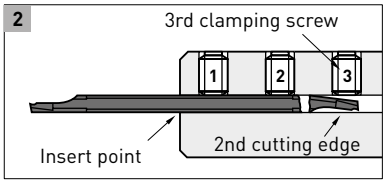
2 Make sure that the clamping screws are tightened to the recommended values.

3 Do not tighten the clamp screw without a bar in place, otherwise the bridge will be deformed.

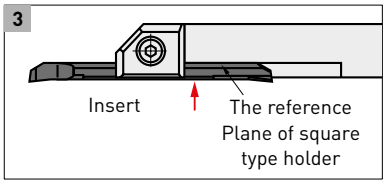
1



2



3



Tighten the clamping screw ensuring the MICRO-MINI TWIN boring bars is in contact with the reference plane of square type holder.

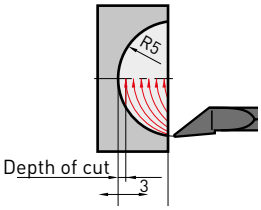
MACHINING METHODS OF THE CR TYPE

By drilling a pre-prepared hole, the machining time will be shortened and chip control will be improved.

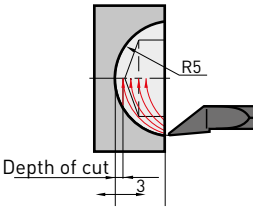
Insert	CR05RS-01B
Workpiece material	C20
Vc (m/min)	80
f (mm/rev)	0.05
ap (mm)	0.05
Coolant	Wet cutting

PROFILE TURNING

Machining a workpiece without a pre-prepared hole

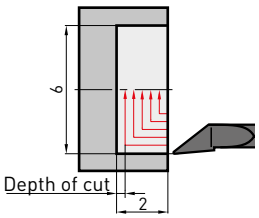


Machining a workpiece with a pre-prepared hole

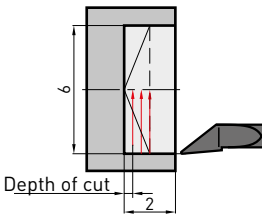


INNER END FACING

Machining a workpiece without a pre-prepared hole

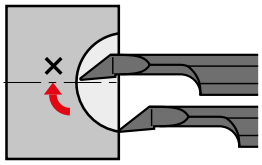


Machining a workpiece with a pre-prepared hole



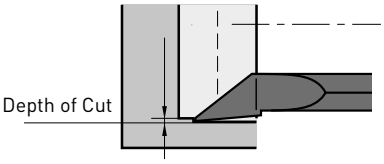
NOTES FOR USE

PROFILE TURNING, INNER END FACING



The cutting edge should not cross the centre line of the workpiece.
If the cutting edge crosses the centre line of a workpiece, the cutting edge can fracture.

COPYING



The depth of cut should be smaller than the corner radius value.
With depths of cut larger than the corner radius value, burrs will be formed.

1/1

1. Recommend wet machining.

PRECAUTIONS WHEN USING THE MICRO-MINI TWIN

When using a holder for general purpose / small automatic lathe:

1 To avoid chipping of the 2nd cutting edge take care when inserting the boring bar into the holder. Refer to fig.1. If the 2nd edge contacts the internal face of the holder there is a possibility that it may chip.

2 When using this type of holder, there is a possibility that damage to the shank and the 2nd cutting edge can occur. Make sure that the clamping screws are tightened to the set torque value. Additionally make sure that there is no clamping screw near the 2nd cutting edge as this can break the boring bar.

When using Mitsubishi Materials holders:

When using holders with a tool overhang of recommended quantity, ensure that the 3rd clamping screw is removed prior to machining. The set torque value for clamping screw is 2.0 Nm.

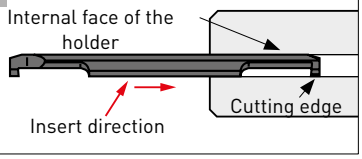
When using a square type holder:

1 When installing the boring bar into the holder, tighten the clamp screws after ensuring the flats on the tool holder are parallel to the reference flats on the micro-mini bar. Refer to fig.3.

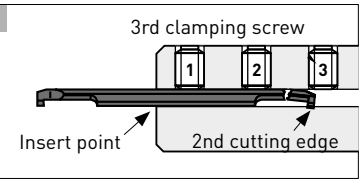
2 Make sure that the clamping screws are tightened to the recommended values.

3 Do not tighten the clamp screw without a bar in place, otherwise the bridge will be deformed.

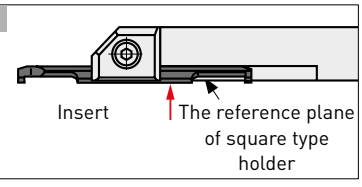
1



2



3



Tighten the clamping screw ensuring making the micro-mini twin boring bars in contact with the reference plane of square type holder.

1/1

1. Recommend wet machining.
2. Pay special attention to machining of small diameters at high revolutions as the feed rate cannot keep up with the speed.

STANDARD DEPTH OF CUT

The chart shows the cutting depths when machining external ISO metric screw threads.

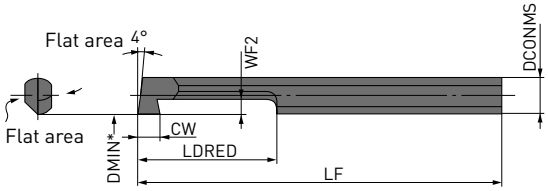
MICRO-MINI BORING BARS

STANDARD MICRO-MINI BORING BARS (SOLID CARBIDE BORING BAR)

- Solid carbide type with minimum cutting diameter Ø 3.2 mm.
- l/d is 5 times the diameter.
- Cutting edge can be shaped according to the application thus, it covers a wide application range (threading, grooving, copying, etc).



Right hand tool only.

* Cutting edge is not honed. Please hone according to the workpiece before machining.

GRINDING THE CUTTING EDGE OF MICRO-MINI BORING BAR

- MICRO-MINI boring bars can be used for boring and grooving without any modifications. It can also be reground as shown below.
- For shaping and regrinding, use a diamond whetstone approximately #250 – #400.
- Please grind according to the application using the figure below as a reference.
