

Nouvelle nuance CVD revêtue pour le tournage acier à grande vitesse

# UE6105

## Technologie de pointe pour le tournage de haute efficacité des aciers.

La technologie de revêtement 2 en 1 assure une plus grande longévité de l'outil.

## Nouvelle nuance CVD revêtue pour le tournage des aciers à grande vitesse

# UE6105

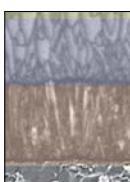

## Caractéristiques

### Performance d'usinage supérieure obtenue grâce à la technologie 2 en 1

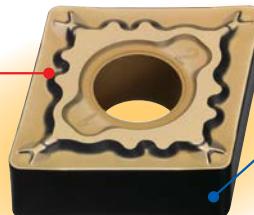

#### Excellente résistance à l'usure en cratère

Le revêtement de type Ti (or) sur la dépouille fait preuve d'une haute résistance à l'usure en cratère. Il renforce également la résistance à l'usure en cratère du nano-revêtement Al2O3.

#### Structure du revêtement sur la dépouille

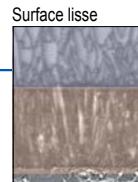

Composé de couche Ti spécial  
Nano-revêtement Al<sub>2</sub>O<sub>3</sub>  
de nano-revêtement TiCN  
Substrat de carbure

#### Excellente résistance à l'usure sur flancs

Le revêtement noir sur les flancs présent sur la surface est extrêmement lisse, qui évite l'usure anormale et l'écaillage, produisant de meilleures états de surface et une longévité stable de l'outil.

#### Structure du revêtement sur les flancs

Surface lisse  
Nano-revêtement Al<sub>2</sub>O<sub>3</sub>  
de nano-revêtement TiCN  
Substrat de carbure

Résistance supérieure à l'usure pour l'usinage à sec et à grande vitesse.

Brise-copeaux UE6105-MA	Concurrent
Vitesse de coupe : 350 m/min	Vitesse de coupe : 300 m/min
Temps de coupe : 4 min 	Forte usure en cratère Temps de coupe : 4 min  Forte usure des flancs 

#### <Conditions de coupe>

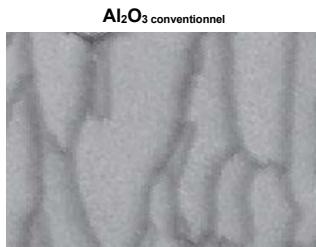

Plaquette : CNMG120408-OO  
Outil : PCLNL2525M12  
Avance : 0,3 mm/tour  
Profondeur de coupe : 1,5 mm  
Arrosage: À sec  
Coupe externe continue  
OO indique les types de brise-copeaux à usage général  
des sociétés respectives.

### Revêtement de pointe grâce à la technologie 2 en 1

#### 1 Nano-revêtement Al<sub>2</sub>O<sub>3</sub> résistant à l'usure

Un usinage à grande vitesse de très haute efficacité peut être réalisé grâce à la couche Al2O3 plus épaisse.

#### Comparaison de la structure Al<sub>2</sub>O<sub>3</sub>

Al<sub>2</sub>O<sub>3</sub> conventionnel

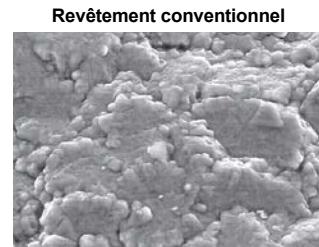

Nano-revêtement Al<sub>2</sub>O<sub>3</sub>

#### 2 Revêtement noir super lisse

De meilleurs états de surface et une longévité stable de l'outil peuvent être obtenus grâce à l'utilisation du revêtement noir super lisse. Ce revêtement limite l'usure et l'écaillage.

#### Comparaison de la surface du revêtement

Revêtement conventionnel

Revêtement noir super lisse

# Plage d'application et conditions de coupe recommandées

L'UE6105 est le premier choix pour le tournage à grande vitesse. Il convient au tournage des aciers doux, carbone et alliés.

## Plage d'application

ISO	Acier						
P01	UE6105						
P10		UE6105					
P20			MC6025				
P30				UE6020			
P40					UE6035		
						UE6400	

## CONDITIONS DE COUPE RECOMMANDÉES

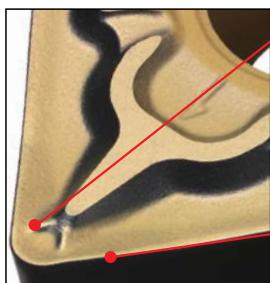

### Plaquettes amovibles négatives (outils de tournage externe)

Matière à usiner	Dureté	Mode de coupe	Brise-copeaux	Vitesse de coupe (m/min)	Avance (mm/tr)	Profondeur de coupe (mm)
P Acier carbone, Acier allié (XC42, 42CD4)	180–280HB	Coupe stable	Semi-finition	LP	220–405	0.10–0.40
		Coupe stable	Ébauche moyenne	MP	200–370	0.16–0.50
		Coupe stable	Ébauche	RP	190–350	0.25–0.60

## Ajout de nouveaux brise-copeaux

NEW

### Brise-copeaux **LP** pour semi-finition

Les protubérances en forme de papillon ont été optimisées pour différentes conditions d'usage.

Les copeaux remontent en spirale et réduisent la résistance de coupe, en améliorant ainsi les surfaces de finitions. La protubérance du brise-copeaux est extrêmement résistante à l'usure, même lors des opérations d'usage à vitesse élevée, ce qui permet de stabiliser la fragmentation des copeaux pendant plus longtemps.

#### Excelle dans le coplage

Une arête tranchante assure une excellente fragmentation des copeaux pendant le coplage et les opérations de chariotage en tirant.

Pointe

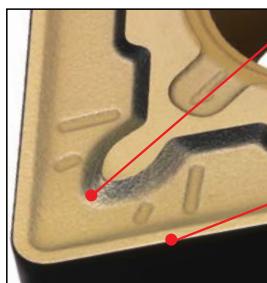

Fiancs

NEW

### Brise-copeaux **RP** pour ébauche

Espace optimisé pour l'ébauche.

Pour une fragmentation efficace des copeaux dans de multiples applications d'ébauche. La face de coupe s'incline progressivement pour empêcher l'accumulation de copeaux et réduire l'usure en cratère.

#### Excellentة résistance aux fractures

L'arête présente un témoin plat résistant et une large poche à copeaux pour réduire l'accumulation de copeaux et les fractures pendant le chanfreinage.

Pointe

Fiancs

## Choix optimal de plaquettes

### P Acier carbone, Acier allié
